

Jupiter Press Kit

elementary OS 0.1: Jupiter

Overview

The first release of elementary OS is version 0.1 and is referred to as “Jupiter.” With this release, the elementary team has chosen to build the OS from a customized Ubuntu 10.10. Much of the underlying operating system is shared with Ubuntu, but the overall experience is quite improved and unique.

Application List

The following applications are installed and accessible from the **Applications** menu:

- **Administration**
 - Additional Drivers
 - Disk Utility
 - Language Support
 - Login Screen
 - Printing
 - Synaptic Package Manager
 - System Monitor
 - Time and Date
 - Update Manager
 - Users and Groups

New Applications

Jupiter includes the following new applications that were designed and developed by the elementary artists and developers:

- Postler
 - Mail client.
 - Postler aims to be easy, simple, clean, beautiful, and automagic.
 - Handles IMAP beautifully.
 - Excellent Gmail label support.
 - Provides the user with smart, sensible defaults.
 - Very fast and light.
 - <https://launchpad.net/postler>
- Dexter
 - Contact management app.
 - Super easy.
 - Goes hand in hand with Postler.
 - Supports VCard importing and exporting.
 - Plugs your contact information directly into your desktop.
 - Lightweight.
 - <https://launchpad.net/dexter-rolodex>
- Lingo
 - Dictionary and thesaurus.
 - Easy-to-use and intelligent.

- Combines the accuracy of definitions and related words from numerous published sources.
- Clean and powerful interface.
- Makes expanding your vocabulary easy and fun.
- Previously titled Purple.
- <https://launchpad.net/purple>

Partnered Applications

The following applications were not developed directly by the elementary team, but we've worked with their developers to make them first-class apps in Jupiter:

- Midori
 - Web browser.
 - Lightweight and elegant.
 - Built using industry standard technologies like Webkit.
 - Designed with the user in mind.
 - Creates a simple, accessible, and fast web experience.
 - Tabs, windows and session management.
 - Straightforward bookmark management.
 - <https://launchpad.net/midori>
- Docky
 - Desktop dock and app launcher.
 - Makes opening common apps and managing windows easier and quicker.
 - Fully integrated into the Jupiter experience.
 - Features a no non-sense approach to and usage.
 - It just works.
 - <https://launchpad.net/docky>

Notable Tidbits

- Jupiter replaces the classic bottom GNOME panel with a dock.
- There are no "desktop icons" in Jupiter.
- Nautilus has been patched with the famous nautilus-elementary changes.
- Desktop effects have been refined.
- The new apps (and Midori) use the simplified AppMenu icon instead of a menubar.
- Jupiter includes the standard Ubuntu repositories alongside the elementary ones.
- Default Ubuntu apps that are not in Jupiter are available from the Software Center.
- All apps that work on Ubuntu 10.10 will work on Jupiter.

More Information

You can get more information regarding Jupiter from the [website](#), from the IRC channel ([#elementary](#) on [irc.freenode.net](#)), or from [DistroWatch.com](#). For press inquiries, please email our press team at press@elementaryos.org.
